

ANTISTATIC CLEANER

1.931.4000

ANTISILICONE DEGREASER FOR PLASTIC COMPONENTS

The degreaser **Antistatic Cleaner** is a product specifically formulated with special solvents and additives with a twofold function. The first of these is to reduce and remove static electricity which for many different reasons accumulates on the plastic parts of vehicles. It is the biggest reason for the attraction and accumulation of dust on these surfaces and the routine and systematic use of **Antistatic Cleaner** before painting effectively prevents this unwelcome phenomenon. The second of these is removing with ease, the trace residues of dirt, grease, oil, silicones, waxes and other contaminating agents present on plastic materials without cutting into them, these being in part sensitive to solvents and without requiring the use of particular non aggressive solvents.

USE

Thoroughly clean the surface of the plastic with a cloth well soaked in degreasing Antistatic Cleaner. When the surface is truly wet, wipe dry with a clean cloth. It is advisable to clean on area at a time, avoiding working large areas of the surface at the same time.

The degreaser Antistatic Cleaner can be used either in washing operation with water (preferably warm) and detergent followed by by cleaning with the traditional solvent based Antisilicone degreaser 3500, or in place of Antisilicone degreaser 3500

TECHNICAL DATA

Pack size	1 l
Storage	store in a cool dry place away from heat

SAFETY AND HANDLING

Product for professional use only.
See MSDS relating this product.
